

# Gorilla Bags – Plasterboard

Green Gorilla specializes in delivering long-term, sustainable recycling and waste management solutions designed to reduce landfill waste and maximize recovery and recycling efforts.

Gorilla Bags for plasterboard provide an eco-friendly way to recycle the plasterboard offcuts.

Made from durable and recyclable polyethylene, Gorilla Bags are designed to hold up to 1000 kg of plasterboard offcuts. Simply fill the bag with plasterboard offcuts, and contact us via phone or email to arrange a pickup.

Once collected, your bag will be transported to the Green Gorilla Resource Recovery facility in Onehunga. There, the plasterboard is processed in the recycling plant to separate gypsum from paper, allowing both materials to be recycled.

By choosing Green Gorilla, you're helping to divert waste from landfills and supporting a more sustainable future.

2cubic metres – 1000kgs
